developing an application that uses something similar to what the program Advanced Exponentials Calculator offers. The only difference is that it uses .NET Compilers instead of command line interpreters to perform its calculations. Here you can take a look at the source code to the app I developed: Modified on: Wed, 11 May, 2014 at 11:57 AM Jose Cesar Moisses - 5 May 2014 How does the app works? **What's New In?**

Advanced Exponentials Calculator is a free, cross-platform Command-Line Interface (CLI) calculator for exponential calculations. At first sight, it can appear to be a rather simple calculator program, but for those who use the command line regularly, there are some unexpected and useful features. After the default number is entered into the program, you can press the Enter key to calculate it with an exponent. While performing an arithmetic operation with the exponent, you can get the results using the arrow keys or just press the Enter key. In fact, you can just enter a mathematical expression in any of the forms that you use in your everyday life, such as  $(2^3 + 5)$ ,  $(1 + 2^3)$ ,  $(x^2 + y^3)$  or  $(2^3 * 5)$ . Advanced Exponentials Calculator is not limited to the base number, so you can use its exponent operator to calculate numbers such as  $(2^3 + 7)$ ,  $(2^3 - 7)$  or even  $(3^4 - 5^5)$ . In addition to these normal operations, you can also use parentheses and other functions with the expressions that you enter. Additional help features include: - Math Symbols with options for Equation, Symbol and Operators. - Alphanumeric keyboard. - Keyboard shortcuts. - Simple Calculator. - Customize the functions and equations. - Use the search option to quickly locate the number you need. - The

calculator starts a new instance of the Command Prompt to perform the calculations. - View the source code and change the language. - Other features: shortcuts, math symbols and custom functions. What's new in version 1.0.0 Version 1.0.0: First version. What's new in version 1.0.0.1 Version 1.0.0.1: Removed the installation procedure because it wasn't working as intended.
