Levels of Mg in the first gill filament of the eastern oyster *Crassostrea virginica* Gmelin, 1789.

Electrolyte measurements were carried out on the gill of a juvenile eastern oyster from the Great Lakes; initial and supplemental Mg levels were determined. A brief explanation of Mg levels in the eastern oyster *Crassostrea virginica* is followed by a discussion of the significance of physiologic Mg levels and Mg-related phenomena of freshwater systems. A concentration of 10.7 mmol/l of Mg in filtrate from the first gill filament was established. The relevance of this work to various physiologic and ecological studies of Mg is discussed. be crucial in order to grasp the initial phases of the dynamics of the planet-ward

migration, the spread of the ecliptic resonance is not important to consider at least in the context of these papers. However, we also want to say that even if the spread of the ecliptic resonance was important for the subsequent planet-ward migration, it would not lead to an Earth-like planet population.
