KEYMACRO is a freeware utility that helps you reduce the number of keystrokes in order to speed up your everyday tasks, such as working with Excel spreadsheets. It consists of a utility that acts as a keyboard macro, which is a collection of short repetitive keystrokes that are mapped to a function or command. Now, it’s common to use a keyboard macro to select a portion of text or perform a function, such as cut, copy or paste. This way, you can speed up the process by entering the code you want directly into the application, instead of choosing the desired action and using a mouse to type the code in, as if you had to do it manually. This program helps you build keystrokes in the most effective way, so you can work faster and become more efficient. It is completely easy to use and doesn't require any prior knowledge to work with it. What can KEYMACRO do for you? You can use this program to build a keyboard macro that will help you work with spreadsheets. Let’s imagine that you open the Excel file that you need to work with and want to cut a certain portion of the content. That would require you to use a cut command on the keyboard. However, this command isn't very handy. Instead, you could use the KEYMACRO utility to build a macro that will trigger the cut command automatically after selecting a part of the content. This way, you will only need to press a couple of keys to perform the desired action. That will reduce the number of keystrokes you have to use and speed up the process. The same way, the program can save you a lot of time if you have to move the cursor between different parts of the document. Simple and straightforward interface In its default state, the interface is pretty intuitive. It offers the possibility to run an automatic test of the hard drive and perform a manual analysis as well. All in all, the program is quite simple to work with. However, if you want to make some changes, you can do so by accessing the “Settings” menu and accessing the various options. Once you’re done with them, just select the “Save” icon and close the window. You can then start the program without any changes. Some last words If you’re looking for a tool that can save you some time, then the KEYMACRO program is certainly worth checking out.
