Sure Delete Crack +

Sure Delete is a secure cleaning application that can completely remove files from any disk. Able to work with FAT16, FAT32 and NTFS files systems, Sure Delete is at the same time a very easy to use program. It's all possible thanks to the wizard that also plays the role of the GUI, which means that users are required to follow a few steps to successfully remove a file. In the meantime, they are also provided with a great amount of information which not only that makes the app friendlier, but it also helps them stay on the safe side all the time. Sure Delete initially needs the path to the items you want to remove, while it then lets you choose between three different file removal methods. Users are allowed to select as many files and folders they want, while the three cleaning systems are the following: Quick Wipe, Department of Defense Method and Super Secure. There are no other settings to play with and hitting the "Next" button gives the green light to the cleaning process. This usually takes just a few seconds, but it also depends on the number of files you select and their size. Sure Delete however remains friendly with hardware resources and works surprisingly smooth on all Windows iterations. All things considered, rookies who want to stay on the safe side and make sure no recovery app can get their deleted data back should give a try to Sure Delete. Professional users hoping for a lot more configuration options have no other option than to search elsewhere. If you want to remove a single file or a group of them, it's as simple as opening the "Select" dialog. From here, users are invited to select the files or folders they want to clean, while the three cleaning methods can be selected. Once a file is selected, Sure Delete quickly goes about deleting it from the disk. It is possible to view a preview of the file you have selected and to delete it right then and there. Sure Delete however has a good side to it and it can be set to automatically delete files in some folders. This happens when the app detects files older than a certain number of days. Sure Delete provides users with another good thing, which is the pop-up that warns them in the event of a problem during the process. It is possible to disable this feature, but if you decide to do so, you may find yourself in trouble, as it is the only way to prevent files from being removed. Sure Delete - we recommend this!
