3416 words 99.9% Everything from the Unity editor and the code behind it can be found at GitHub.com. We are currently looking for a strong C# developer with experience of modding games. If you think you might be a great fit, get in touch! This is the official configuration profile for the PS4. This profile was created by the UE4 Technical Support Team. • A configuration profile allows you to create and save custom profiles for your Unreal Engine 4-powered project. You can use these custom config files to define how your project will operate. This project is an example of how you can use the config files to optimize your project. • In order for your project to create a valid config profile, follow these steps: 1) Create your own config profile. 2) Enable config profiling for your project. 3) Load up your projects assets. 4) Copy all your assets from your project folder. 5) Save your project with the config profiled assets. In the weeks that followed, we started talking to BAFTA as well as the Academy. And so, a few months after our first call, we were asked to present the idea again. We were now working with producers at Sony Pictures, and that's when we found out what was happening. • The BAFTA software used on the telepresence cameras at the Oscars is based on Unity, and so BAFTA Productions contacted us to see if we would be interested in porting it to Unreal Engine 4. • At the first call, we were asked to give a quick presentation about our tool and process. So that was our job. But we also talked to the BAFTA team about their needs for a telepresence solution, and they mentioned that they were planning to use Unreal Engine 4 in their upcoming production. • There was some question around whether they could use their existing telepresence tool if we were to develop a new one that they could use. At this point, we felt that it was only right to talk to them about it. • We met with the team at BAFTA Productions a couple of times before the Academy Awards. During these meetings, we talked about everything about the project: the tools we planned to use, the content that we expected to deliver, and all the technical challenges that we knew we would face. •
