I'm using bootstrap and am using jquery mobile for everything else. The only thing I can't figure out is how to make the phone numbers in the contact information section of my site visible only if the visitor is using a mobile browser. All the tags show up normally if a normal browser, but on the mobile version the tags show up as regular text and the phone numbers are not visible. I'm new to jQuery mobile, so it might be a simple fix that I can't find. 2edc1e01e8

What's New In Alchemist?

Designed by Alastair Gordon, Alchemist is a well-rounded audio effects plug-in with a modern sound, elegant parameter architecture, and lots of features. The intuitive interface allows the user to shape the sound in as many ways as necessary, even generating thousands of different effects. The graphical interface is useful and simply easy to use. This effect plug-in is a heavyweight for the price and does the job of many more expensive plug-ins. Graphical Interface: Alchemist comes with a graphical user interface, which is simple to use and allows great flexibility for shaping the sound. The control panel is divided in four main areas; the first one shows a control graph representing the signal and all the controls visible on the screen. The second part is a DSP graph, which represents all the controls of the effects section. The last two sections are a preview area and a mixer, which are not present in the regular Alchemist version. The controls and the graphs are easy to access and it is possible to add/remove
