KEYMACRO is a desktop application for encoding, decoding and translating keystrokes, mouse clicks and other user events into the appropriate shortcuts. It is useful for users who frequently alternate between using mouse and keyboard, and when the issue of having two set of hotkeys for the same operations is not an

option. Using keywords (aka key combo) instead of hotkeys will save you from having to remember the locations of the hotkeys and re-enter them all the time. Also, you can use multiple keywords per operation for the same event. KeyMACRO supports Unicode, Dvorak and QWERTY keyboard layouts, but as long as the original keyboard layout is supported (i.e. English), you can use any of them as you wish. Primary features:

- * Supports multiple keyboard layouts
- * Translates keyboard events into any of the supported keyboard layouts
- * Allows to switch keyboard layouts, hotkeys, and keywords on the fly
- * Lets you edit and save any keyboard event
- * Creates and saves keyboard shortcuts for all supported keyboard layouts
- * Saves list of keyboard layouts, hotkeys, keywords, and editable keyboard events
- * Supports multiple keyboard layouts at the same time
- * Supports Internet Explorer 6+
- * Encodes and decodes all user events to and from Windows
- * Supports Internet Explorer 6+
- * You can easily add more keywords and hotkeys
- * You can easily edit your keyboard layout, keyword, and hotkey settings
- * You can define keyboard shortcuts for all supported keyboard layouts
- * Fully keyboard layout independent
- * Supports all Internet Explorer 6+ keyboard shortcuts
- * Fits onto the desktop in one window
- * Support for multiple Internet Explorer 6+ desktop windows
- * Works with any Unicode keyboard layout (even Cyrillic)
- * Supports all Unicode keyboard layouts
- * Hotkeys
- * Copy and Paste shortcuts

HD_Speed

HD_Speed is an application that tries to give users a better insight into the performance of the storage devices we rely on every day. It can use any drive we have access to, be it internal or external. It's a must-have application, for those who spend a lot of time in front of the computer and want to ensure all hard drives are in their best conditions. HD_Speed can also be run on a removable drive, which means you can have a look at the results instantly from any computer you use, and from any location. Features: A drop-down list which includes the features available in HD_Speed is featured below the main application window. The interface is very user-friendly, as all options are clearly displayed, while the status of the HD_Speed application is also displayed in the form of a graph. Block Size HD_Speed can be used to test all different block sizes, from 1 KB up to 16 MB. This is an advanced setting, so we only have a few choices in our disposal. Volume Size HD_Speed also has the ability to test the size of the volume the drive is operating on. It's a very useful option if you'd like to test the integrity of the drive or to identify how bad it's been used recently. S.M.A.R.T. HD_Speed can test the performance of the drive using the S.M.A.R.T. (Self-Monitoring Analysis Reporting and Telemetry) system. The S.M.A.R.T. feature is a great way to check if your hard drive is failing, and also to spot any possible errors that can happen. Disk Read HD_Speed can test the Disk Read speed of the selected hard drive. It is a great way to determine how well the drive is running. If the disk read speed is slow, this could mean that the drive is either faulty, or that the hard drive is operating below its design specifications. Disk Write HD_Speed can test the Disk Write speed of the selected hard drive. It is a great way to determine how well the drive is running. If the disk write speed is slow, this could mean that the drive is either faulty, or that the hard drive is operating below its design specifications. Disk Overall HD_Speed can test the Disk Overall performance. It gives you a much better insight into the performance of the hard drive than the "Disk Read" or "Disk Write"
