DESCRIPTION and FEATURES: PicsArt Flash is one of the best photo editing applications. It allows you to edit photos in a similar fashion to professional photo editors. Create a new picture or modify an existing one. Select the picture you want to edit from the list of pictures on the screen. Enter the desired adjustments in the appropriate editing fields. You can use the following tools to make your photo looks more vivid and natural: - rotate the picture - adjust the picture's contrast and brightness - re-size and re-shape the picture - enhance the picture's contrast and highlight its colors - crop the picture, add a frame and a shadow - insert text on the picture - apply special effects - simulate a drawing effect - transform the picture with different type of effects - add special frames to the picture - add different text effects - protect the picture

PicsArt Flash is also a professional drawing tool. You can doodle, scribble, trace, draw or paint on the canvas that you select. Choose from over a hundred different brushes and gradients, as well as fill and gradient modes. You can use several tools and effects to transform your strokes, effects or drawings into pictures. You can also edit photos with an artistic touch. Use the canvas and the painting tool to add and move different elements on the picture you have selected. You can also erase or paint on the canvas to make it look more exciting. You can even perform different types of

Jpg2WebP Converter is an easy to use and fast converter which converts any jpg, gif, png, bmp or jpeg into a WebP image format. The... Read more Description: Jpg2WebP Converter is an easy to use and fast converter which converts any jpg, gif, png, bmp or jpeg into a WebP image format. The converting process is very easy and can be completed by following the steps below: Step 1. Load the images you want to convert. Note: Before you convert the image, you should remove the noise. This is an important step if you want to get good quality images. Step 2. Choose the output WebP file format. This includes the format of the images you want to convert. There are four output formats: 1. WEBP-VP8 - WebP version 8 (High quality) 2. WEBP-VP8-LDR - WebP version 8 (Low quality) 3. WEBP-VP8-FDR - WebP version 8 (Freeze quality) 4. WEBP-VP8-LDR-FDR - WebP version 8 (Low quality and freeze quality) 5. WEBP-VR - WebP video (Frames images and animation) 6. WEBP-FS - WebP format with alpha transparency (Images with transparency) 7. WEBP-RGB - WebP format with RGB transparency (Images with transparency) Note: You need a computer with at least 4 GB RAM memory to convert a large number of images. Step 3. Choose the quality of the output image you want. The original image will be saved after the conversion. Output and original image size are optional and can be set at will. If you choose the "auto quality" mode, the quality of the output images will be automatically decided by the images you are converting. If you select the "original size" mode, the output images will be the same size as the original. Step 4. Click "convert". The conversion will be completed immediately after you have clicked "convert". Note: Converting a large number of images is pretty fast. The speed of the converting process is based on the number of images you are converting. And converting a larger number of images will take more time. Cleans the edges of images Removes image noise Supports wide range of image formats Jpg2WebP
