Today I'm back with a new application for those who want to build their own clocks. I have created this application because I had to build one of these clocks for my friend, and it's nice to be able to share it with everyone! Now you can build your own clock with 7 different options for the shape of the elements, including rectangles, circles, triangles, and lines (which are also customizable). You can use 16 different color shades to build your clock. You can choose the width of the frame, the sides of the dial, and the color of the background. This application has two main sections: the design section (in the upper part of the screen) and the area where you can design your own clock (below the design section). In the design section, you can choose the shape of the elements, the background colors, and the colors of the dial (to decide which parts of the design you want to have color). It also has a box for the title and the content. The content box is a field where you can enter the content of your design. If you want to make the content appear on the left or on the right, you just have to drag it to where you want to put it. The design section has two tabs: design and scroll. In the design tab, there are four layers (where you can put the design elements) which can be zoomed. The layers have 16 different color shades. If you zoom out, you see the whole design. And if you zoom in, you will see the elements of the layer you selected in high detail. In the scroll tab, the middle part is where you put the content of your clock (with the options for

MyDraw is an application that could simply be categorized as a one-stop-shop for diagram drawing and mind map creation. It manages to offer cheery, full-of-life templates and dull, more-to-the-point designs for various scenarios of usage. Regardless of what you plan on doing with this app, if it involves some sort of organizational tree-like diagram, this app will more than suffice. Interface and general design If you feel like you've seen the interface somewhere else, it is most likely because indeed the app's look is reminiscent of any number of Microsoft Office apps. Regardless, the button aspect and general tool arrangement are where the similarities stop. The content is indeed unique. Take for example the number of options one has when creating a simple work-related diagram. There's a plethora of types and styles, including charts, carousel, card index, clipboard, or clapperboard designs. Each element within a certain template is adjustable to its core. You can add more elements or remove leftovers. You can color each bubble a certain way, and use various connection line types. Various shapes and sizes The best part about this app is it's versatile in all imaginable aspects. For example, you can use an already thought-out design or create your own. You have all the shapes one might desire in order to create a masterpiece. Add shadows to your added elements, and make sure the lines connecting these are as desired. Play with colors or choose a palette to make sure everything matches in the end. The beauty of this particular app is in the fact that it offers many possibilities in terms of usage. For example, one can create an event schedule for a school or class. You've got all the tools. Why not create a stylish instruction pamphlet explaining what a certain company expects from its customers? That can also be achieved with MyDraw. Aside from classic templates such as Cause and Effect and Calendar, one can design emergency planning diagrams, floor plans, or even flyers and certificates for various activities. MyDraw might be overlooked by some on account of its unoriginal interface. While this could be a valid argument against its originality, the app manages to implement and offer a set of tools that could actually help the user create interesting materials with great ease. As far as this last observation is concerned, few competing apps can offer the same. Grammarly is a grammar checker, but it also deals with spelling, synonyms, and punctuation. Like most free tools on the web, it�

As far as this last observation is concerned, few competing apps can offer the same. Quarto is a friendly, low-fi app offering a toolbox for a range of diagramming tasks. The set of tools on offer are basic, though enough to allow you to get by. Interface and general design No doubt about it, Quarto is a work of a very basic nature. The design is not just a touch of color here and there. The layout is dull.
