The Last Jedi sees the return of Luke and the very last live-action incarnation of Darth Vader. So it's perhaps no surprise that Lucasfilm head Kathleen Kennedy and director Rian Johnson have cited The Empire Strikes Back and Return of the Jedi as influences on Johnson's new film. In an interview with the Nerdist (via CBM), Johnson revealed his favorite scene from Empire and why he sought out that specific film to keep in mind when writing The Last Jedi. "I thought about that scene a lot, because I think it's about fighting what we're afraid of, and that is anger and rage," Johnson said. "It's a scene that I think people who are really good at fighting anger and rage are really good at being a good leader. When you fight that, you can't always win, but I think you don't always lose." Johnson wasn't the only one to notice that Empire had that exact scene in it. When asked if that scene, or any other part of Empire, helped Johnson to develop the story for The Last Jedi, Kennedy stated that it was the most obvious scene to compare The Last Jedi to. "I think the three moments that Rian most pointed out to me were Luke's discovery of Ben's body on the ice planet and the scene on Bespin and then, for me, the end of Return of the Jedi when Luke is standing on the launching bay of the ship with Leia and Han and this really weird music starts playing and, you know, it's a three-minute emotional rollercoaster for both of them." Empire was released in 1980, while The Last Jedi is expected to hit theaters in December.
